

# General Topology\*

Tewfik SARI<sup>†</sup>

March 20, 1996

## Contents

<b>1 Halos in topological spaces</b>	<b>109</b>
1.1 Topological proximity . . . . .	109
1.2 The halo of a point . . . . .	110
1.3 The shadow of a subset . . . . .	111
1.4 The halo of a subset . . . . .	112
<b>2 What purpose do halos serve ?</b>	<b>113</b>
2.1 Comparison of topologies . . . . .	114
2.2 Continuity . . . . .	114
2.3 Neighbourhoods, open sets and closed sets . . . . .	114
2.4 Separation and compactness . . . . .	115
<b>3 The external definition of a topology</b>	<b>116</b>
3.1 Halic preorders and $\mathcal{P}$ -halos . . . . .	117
3.2 The ball of centre $x$ and radius $\alpha$ . . . . .	119
3.3 Product spaces and function spaces . . . . .	121
<b>4 The power set of a topological space</b>	<b>123</b>
4.1 The Vietoris topology . . . . .	123
4.2 The Choquet topology . . . . .	124
<b>5 Set-valued mappings and limits of sets</b>	<b>125</b>
5.1 Semicontinuous set-valued mappings . . . . .	125
5.2 The topologization of semi-continuities . . . . .	126
5.3 Limits of Sets . . . . .	127
5.4 The topologization of the notion of the limit of sets . . . . .	129
<b>6 Uniform spaces</b>	<b>130</b>
6.1 Uniform proximity . . . . .	131
6.2 Limited, accessible and nearstandard points . . . . .	132
6.3 The external definition of a uniformity . . . . .	133
<b>7 Answers to the exercises</b>	<b>134</b>

---

\*This is Chapter 6 of *Nonstandard Analysis in Practice*, Francine Diener and Marc Diener Editors, Universitext, Springer, 1995.
